

Cingular Account Setup and Activation

Each enclosed modem has been pre-configured to operate on the Cingular (formerly AT&T Wireless) network. However, before you can begin to use your new modem, you need to set up a wireless data account. Multi-Tech Systems, Inc is a certified national activation agent for Cingular. To obtain information about available data plans and to purchase and activate a wireless data account, contact Multi-Tech in the USA at 888-288-5470.

Follow these steps to set up a wireless account:

- Contact Multi-Tech or wireless carrier/partner/reseller to obtain an account and/or SIM card.
- Provide your activation agent with the following:
 - * Billing information and business ID such as your Federal Tax I.D.
 - * The wireless services required.
 - * Each modem's 15-character IMEI number located on the modem's label.
 - * You may be asked to provide the modem's model number. This number allows the carrier to verify this modem as one of its approved models.

Important:

If asked for this number, give the Multi-Tech Systems, Inc. model number located on the modem's label. Do not give your product or device name and number.

Examples of Multi-Tech model numbers: MTCBA-xx, MTSMC

- * Each SIM card's unique number if the SIM card is included with the modem. This may be referred to as the ICCID number.

Once the SIM card is activated, installed in the modem, and powered-on, the modem is ready for use.
